

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

AN ADDITION TO THE BIRDS OF OHIO.

LYNDS JONES.

Writing under date of May 25th, Mr. William P. Holt, of the Toledo High School, announces the capture near there of a Cory's Bittern (*Ardeotta neoxena*), a long sought and much anticipated bird. The bird was captured in the Casino marsh on May 25th. Mr. Holt states that the specimen is in fine condition, and that he had seen either this bird or others in the same situation three times during the week. It seems entirely within reason that this bird was not a solitary one, but that at this time, when the Least Bitterns were so uncommonly numerous in these marshes, as well as in the marshes all along the southern shore of the lake, that there might have been something like a flight of them. However that may be, no other records are forthcoming. This species should be added to the list of Ohio birds in its proper place in the regularly occurring species because its range clearly covers the state, this record proving it.

A SCARCITY OF BIRDS IN THE NORTHERN
STATES.

Reports come in from many parts of the country north of the southern border of Ohio to the effect that birds are remarkably scarce for the season. The suggestion has been made that this scarcity is likely due to the unfavorable breeding season of last May and June, when the weather was cold and very wet, so that the usual number of young were not reared. This might easily be true if there was also an unusual mortality among the old birds, or if conditions of weather or food supply were such, during the summer and autumn months, that an increased mortality occurred. Before any final decision can be relied upon we should know what are the conditions the whole country over, for if there be any unusual
